ABSTRACT:

PURPOSE: To attain easily check of a telephone number of the 3rd party during talking by operating a button or a key during talking to display selectively a telephone number stored corresponding to the button or the key.

CONSTITUTION: A microprocessor 5 at a terminal device discriminates whether or not it is during talking by allowing the processor 5 to read the state of a telephone circuit when a subscriber is talking with an opposite party. When

the opposite party A during talking inquires about a telephone number of the other subscriber B, the said subscriber operates a button or key device 1 corresponding to the party B at first. A reading controller 3 is activated by this operation, the microprocessor 5 reads it, confirms that the present mode is the talking mode and displays the telephone number corresponding to the depressed button onto a number display device 2.
